SUMMARY

Software Engineer and IT professional with 6 years of experience across MSP and in-house environments, transitioning into cybersecurity. Currently the sole owner of security at a financial services firm, responsible for firewall configuration, Microsoft 365 security and retention policies, and endpoint protection. Background in alert triage, incident response, identity and access management (Entra ID, MFA, Active Directory), backup and recovery, and PowerShell/Python automation. Pursuing a B.S. in Cybersecurity and Information Assurance at WGU, with CompTIA A+, Network+, and Security+ in progress.

CORE SKILLS

Security Operations: Firewall Configuration, Endpoint Protection & Scanning, Alert Triage, Incident Response, Root Cause Analysis, Escalation Handling

Identity & Cloud Security: Microsoft 365 Security, Retention Policies, Entra ID, MFA, Active Directory, Exchange Online, Microsoft Azure

Infrastructure: Windows Server, Linux, Network Troubleshooting, Acronis Backup & Recovery

Automation & Scripting: PowerShell 7+, Python, Bash, SQL, Rewst API

Development: C#, ASP.NET Core, TypeScript, React, REST APIs, Git/GitHub

Tools: NinjaOne RMM, ConnectWise PSA, Odooh/Odooh.sh, Postman, VS Code

PROFESSIONAL EXPERIENCE

Software Engineer | Nationwide Loan Consultants & Advisors — Pompano Beach, FL Aug 2026 – Present

- Serve as the organization's sole security owner and security escalation point alongside software engineering and IT support duties.
- Configure and maintain firewalls to secure the corporate network perimeter; deploy and manage endpoint protection and run security scans across company devices.
- Configure Microsoft 365 security settings and retention policies to protect company data and support records requirements.
- Contributed to the company's Microsoft 365 migration as well as CRM and website migrations.
- Customize the Odooh/Odooh.sh CRM with Python backend development; resolve IT tickets, hardware/software issues, and end-user escalations.

NOC Technician / Automation Specialist | iPower Technologies — MSP Environment

- Monitored and triaged infrastructure alerts across multi-client environments in NinjaOne RMM; supported engineering teams during service-impacting incidents.
- Managed identity and authentication across enterprise client accounts, including Active Directory, Entra ID, MFA configuration, and login troubleshooting.
- Administered Microsoft 365 and Exchange Online: mailbox provisioning, mail flow diagnostics, message tracing, and retention policy troubleshooting.
- Managed Acronis backup monitoring, alert response, and recovery workflows across client server environments.
- Built PowerShell and Rewst API automation for alert response, ticket routing, and recurring remediation (SFC/DISM repair, disk cleanup, spooler resets, network diagnostics).

PROJECTS

Exchange Online & Identity Troubleshooting Workflows

- Designed repeatable investigation workflows for Entra ID authentication failures, Microsoft 365 mail flow issues, and mailbox recovery, with documented resolution paths for escalation.

Alert Trend Automation — NOC Workflow

- Built Rewst API and PowerShell workflows that identify recurring alert patterns across client environments and trigger automated ticketing, diagnostics, and remediation, reducing alert-to-resolution time.

PowerShell System Repair & Disk Remediation Toolkit

- Engineered a modular toolkit for health checks, cleanup, and network repair with structured logging; integrated NinjaOne triggers to resolve low-disk alerts automatically and escalate only when remediation fails.

CERTIFICATIONS
